16	Nik Daliana Nik Farid	Faculty of Medicine (FoM)	Sexual and Reproductive Health Program	Flat Bandaraya Kampung Kerinchi, Kuala Lumpur	Adolescents had improved their understanding in sexual and reproductive health. This is because, once they are equipped with the right information, adolescents had more confident and able to face up to any sexual and reproductive challenges. Most importantly, they delay sexual intercourse until they are married and avoid sexual risk behaviours which could lead to sexually transmitted infections including HIV/AIDS and teenage pregnancy. This prevented social implications to the adolescents who are affected e.g. stigma. Since the topic of 'sex' is still a taboo in most communities and people are not open to talk about it, this programme was help to educate adolescents who were not receiving any sex education from their parents or other members of family. Also, this project had inreased their communication and awareness on sexual health to other adolescents living in other communities.	<ul style="list-style-type: none"> ● SDG 3: Good Health & Wellbeing ● SDG 4: Quality Education
